

Sample Wordpress upgrade test script

Revision history

1.0 – July 13th 2008 – First version

1.1 – August 1st 2008 – Added flash player check

- Download the latest version of Wordpress <http://wordpress.org/latest.zip>
- Install it on your local xampp copy
- Install all the plugins and the same theme as your production site.
- Test the installation with the following sample test script

	View your test site through a browser. Does it display correctly? Check the whole site – check things like the tags, categories, links, etc.
	Log onto the site. Can you log on successfully?
	Post a new podcast. Was the post successful?
	Can you see the new post on the website?
	Can you download the media file from the website?
	Subscribe your podcatcher to the test RSS feed. Does it download the MP3 file?
	Can you play the podcast through the flash player?
	If you're using PodPress' stats feature, is the stats updating correctly? (Note – this may require special file and web server permissions to work correctly)
	Does your other plugins work correctly?
